Table 1: Proportion of men and women across caste groups with remarriage gains above the 95th and 75th percentile in caste neutral marriage market

| Caste | 75th Percentile | | 95th Percentile | |
|---|---|---|---|---|
| | **Men** | **Women** | **Men** | **Women** |
| ST | 25.35 | 37.61 | 0.46 | 11.47 |
| | (0.4369) | (0.484) | (0.0679) | (0.319) |
| SC | 27.59 | 27.47 | 4.53 | 4.94 |
| | (0.4471) | (0.4468) | (0.2081) | (0.217) |
| OBC | 25.00 | 25.14 | 6.25 | 5.29 |
| | (0.4330) | (0.4342) | (0.2423) | (0.2241) |
| Intermediate Caste | 17.39 | 7.25 | 8.70 | 0.00 |
| | (0.3785) | (0.2612) | (0.2838) | (0.0000) |
| Upper Caste | 23.33 | 9.27 | 8.00 | 0.66 |
| | (0.4241) | (0.2910) | (0.2722) | (0.0814) |
| **Total** | 25.35 | 25.26 | 5.11 | 5.37 |
| | (0.4350) | (0.4347) | (0.2203) | (0.2256) |

*Notes:* This table reports the proportion of men and women within each caste group whose remarriage gains exceeded the 75th and 95th percentile of the sample distribution in a caste-neutral marriage market. Values represent percentages of individuals exceeding the thresholds. Standard deviations are shown in parentheses below each percentage.

Table 2: Fractional Logit Regression Estimates of Gain from Remarriage by Caste and Education

| Variable | Panel A: Men | | Panel B: Women | |
|---|---|---|---|---|
| | No edu | Edu | No edu | Edu |
| Constant (ST category; other covariates at zero) | -0.80745 | | 0.29569 | |
| | (0.29482) | | ( 0.25882) | |
| Constant (ST category with no education; other covariates at zero) | | -0.56602 | | 0.45412 |

*Notes:* Standard errors in parentheses.
$^{*}p < 0.05,$ $^{**}p < 0.01,$ $^{***}p < 0.001.$
All regressions are estimated using fractional logistic regression, which represents the share (percentage converted to a fraction) of remarriage outcomes.
The dependent variable captures the probability of remarriage, with higher values indicating a greater fraction of remarriages.
